

### **Company Mini-bio**

KIT-AR's lean manufacturing / poka-yoke tools empower shopfloor workers to reduce and sometimes eliminate errors and waste in production lines. Our goal? Enabling your teams to execute every process right first time, every time, all the time!

### **Company bio**

Research indicates that costs of poor quality (i.e. errors and waste) in production lines represent a loss between 5%-40% of revenues of every manufacturer globally.

This problem is amplified by the lack of digital skills in shopfloor teams, slow digitalization efforts and continuously unexpected non-conformities.

KIT-AR upskills shopfloor workers with a set of lean manufacturing tools:

- KIT BUILD digitalizes company's processes and quality assurance requirements;
- KIT ASSIST allows the visualization of step-by-step instructions in augmented reality;
- KIT SMART performs automated quality checks during each process
- KIT INSIGHT retrieves intelligence from your shopfloor processes to enable continuous improvement

The result is a system set to continuously improve your manufacturing production's quality.

Benefits include reduced TAKT time, increased up time, waste reduction and traceability, efficient line-balancing, reduced non-value time and accelerated digital enablement.

KIT-AR was founded in 2018 and operates globally through its 3 offices in Europe.
